

DEFENSE INFORMATION SYSTEMS AGENCY
JOINT INTEROPERABILITY TEST COMMAND
2001 BRAINARD ROAD
FORT HUACHUCA, ARIZONA 85613-7051

21 October 2003

IN REPLY
REFER TO: Networks, Transmission and
Integration Division (JTE)

MEMORANDUM FOR DISTRIBUTION

SUBJECT: Joint Interoperability Test Certification of Nortel Networks Meridian 1
Option 51C Digital Switching System with Software Release 25.47

References:

- (a) DOD Directive 4630.5, "Interoperability and Supportability of Information Technology (IT) and National Security Systems (NSS)," 11 January 2002
- (b) CJCSI 6212.01B, "Interoperability and Supportability of National Security Systems and Information Technology Systems," 8 May 2000

1. References (a) and (b) establish the Defense Information Systems Agency (DISA), Joint Interoperability Test Command (JITC), as the responsible organization for interoperability test certification. Additional references are provided in enclosure 1.

2. The Nortel Networks Meridian 1 Option 51C Digital Switching System with Software Release 25.47 and specified patch groups listed in enclosure 3, hereafter referred to as the system under test (SUT), meets all of its critical interoperability requirements and is certified as interoperable for joint use within the Defense Switched Network (DSN). JITC tested and certified the Nortel Networks Meridian 1 Option 61C, Digital Switching System with Software Release 25.47. This system is identical in software and hardware to the Meridian 1 Option 51C, the sole exception being that the Meridian 1 Option 51C houses only a single processor. JITC analysis determined the Option 51C to be functionally identical to the Option 61C for interoperability certification purposes. The identified test discrepancies shown in the Certification Testing Summary (enclosure 2) that remained open after software patches were applied and regression testing was completed have minor operational impact. The SUT was tested and met the critical interoperability requirements for the following DSN switch types: Private Branch Exchange (PBX) 1 and PBX 2. This certification expires upon changes that could affect interoperability, but no later than three years from the date of this memorandum.

3. This finding is based on interoperability testing conducted by the JITC at the Network Engineering and Integration Laboratory, Ft. Huachuca, AZ. The Certification Testing Summary

JITC Memo, Networks, Transmission and Integration Division (JTE), Joint Interoperability Test Certification of Nortel Networks Meridian 1 Option 51C Digital Switching System with Software Release 25.47

(enclosure 2) documents the test results and describes the tested network and system configurations. System interoperability should be verified before deployment in an operational environment that varies significantly from the test environment.

4. The interoperability summary of the SUT is indicated below in table 1. The interoperability status and criticality are listed in table 2, and the Exchange Requirements (ERs) and Functional Requirements (FRs) for each network interface are listed in table 3. The Nortel Meridian 1 switch product line offers a Voice over Internet Protocol capability; however, this capability is not covered by this certification. Network Management (NM) capabilities of the SUT platform were tested in accordance with the DISA NS53 requirements as set forth in references (c) and (d). This reference requires that a switch provide NM capabilities via either Ethernet, serial (EIA-232), or serial (X.25 or BX.25 variant). This capability is not a critical requirement for a PBX1, however the SUT meets the NM requirements through the use of serial (EIA-232) connections. This interoperability test summary is based upon evaluation of:

- a. The following network interfaces as specified in reference (e): DSN, Defense Red Switch Network Gateway, Tactical Network Gateway, North Atlantic Treaty Organization Gateway, and Public Switched Telecommunications Network or Commercial Network Gateway.
- b. The interface and signaling requirements for trunk/line interfaces, and interoperability ERs and FRs derived from references (f) and (g).
- c. The overall system interoperability performance derived from test procedures listed in reference (h).
- d. Review of Letters of Compliance submitted by Nortel Networks.

Table 1. Nortel Networks Meridian 1 Option 51C Digital Switching System Interoperability Summary

Network	Critical	Status	Remarks
DSN	Yes	Certified	- Certified as a PBX1 and PBX2 - VoIP not certified - The identified test discrepancies shown in enclosure 2 that remained open have an overall minor operational impact.
Commercial Network Gateway	Yes	Certified	- All critical requirements met
Legend: DSN – Defense Switched Network PBX – Private Branch Exchange VoIP – Voice over Internet Protocol

5. JITC distributes interoperability information via the JITC Electronic Report Distribution (ERD) system -- ERD uses unclassified (NIPRNET) e-mail. More comprehensive interoperability status information is available via the JITC System Tracking Program (STP). The STP is accessible by .mil/gov users on the NIPRNET at <https://stp.fhu.disa.mil/>. Test reports, lessons learned, and related testing documents and references are on the JITC Joint Interoperability Tool (JIT) at <http://jit.fhu.disa.mil> (NIPRNET), or <http://199.208.204.125/> (SIPRNET). Information related to DSN testing is on the Telecom Switched Services Interoperability (TSSI) website at <http://jitc.fhu.disa.mil/tssi>.

6. The JITC point of contact is Mr. John Hooper, DSN 879-5041 commercial (520) 538-5041, FAX DSN 879-4347 or e-mail to hooperj@fhu.disa.mil.

CERTIFICATION TESTING SUMMARY

- 1. SYSTEM TITLE.** Nortel Networks Meridian 1 Option 51C Digital Switching System with Software Release 25.47 and specified Software Patch Groups listed in enclosure 3 (hereafter referred to as the system under test [SUT]).
- 2. PROPONENT.** Defense Information Systems Agency (DISA).
- 3. PROGRAM MANAGER.** Mr. Howard Osman, Network Services (NS) 53, Room 5W23, 5275 Leesburg Pike, Falls Church, VA 22041, E-mail: Osmanh@ncr.disa.mil.
- 4. TESTERS.** Joint Interoperability Test Command (JITC), Fort Huachuca, AZ.
- 5. SYSTEM UNDER TEST DESCRIPTION.** The Nortel Networks Meridian 1 Digital Switching System product line, in addition to the Option 51C, includes Options 61C, 81C, and 81CPP. These platforms utilize the same software and trunk/line card hardware as the SUT, with the exception that the SUT houses a single call processor. The Option 51C offers the following features: scalable, distributed platform for growth from 200 to 2000 lines, modular client/server architecture for flexibility and scalability. Nortel Network's Meridian 1 Option 51C Digital Switching System is currently in use within the Defense Switched Network (DSN) providing Private Branch Exchange (PBX) 1 switch functionality.
- 6. OPERATIONAL ARCHITECTURE.** The Generic Switching Center Requirements (GSCR) operational DSN Architecture is depicted in figure 2-1.

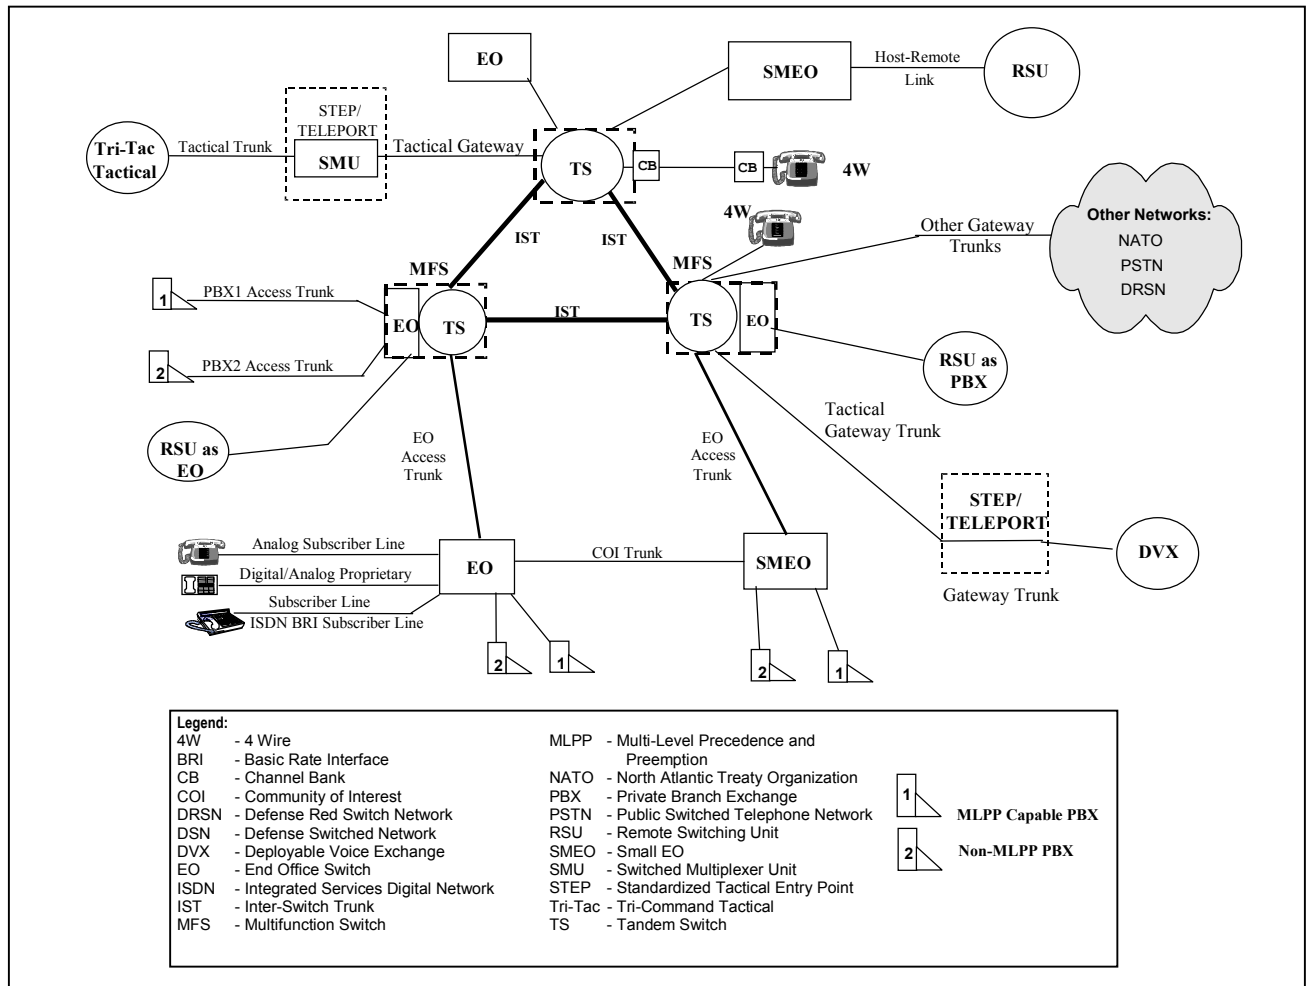

Figure 2-1. DSN Architecture

7. REQUIRED SYSTEM INTERFACES. This interoperability test certification is based upon evaluation of the network interfaces as specified in:

- a. The Chairman of the Joint Chiefs of Staff (CJCS) policy for Department of Defense voice services requirements for the DSN.
- b. Interface and signaling requirements for trunk, line, and network management derived from the GSCR document, and the DISA Network Services (NS) 53, Memorandum, "DSN Global Network Requirements for Small End Office and Private Branch Exchange Category of Switches," dated 18 March 2003.
- c. Interoperability Exchange Requirements (ERs) and Functional Requirements (FRs) derived from the GSCR.

The ERs and FRs for the CJCS network interfaces are indicated in table 2-1. The criticality and certification status of these interfaces can be found in paragraph 11. The test summary can be found in paragraph 11b.

Notes:

- 1 SUT does not meet all the GSCR exchange requirements for Hotline Services. Hotline Services is not a critical requirement.
- 2 SUT does not meet all the GSCR exchange requirements for Attendant Services. Attendant Services is not a critical requirement.
- 3 The certification/compliance of interoperability to commercial networks was satisfied based on the review of the vendor's letter of compliance to requirements identified as the "L" and "V" items listed in appendix E of the GSTP and specified in tables 2-1 through 2-15 of the GSCR.

8. TEST NETWORK DESCRIPTION. The SUT was tested at JITC's Network Engineering and Integration Laboratory in a manner and configuration similar to that of the DSN operational environment. This test was conducted using three test configurations shown in figures 2-2 through 2-4. Testing of the system's required functions and features was conducted using the test configuration depicted in figure 2-2, which accurately emulates the DSN operational environment. Network integration testing was conducted using the test configuration depicted in figure 2-3. Figure 2-4 depicts the test configuration used to test the Advanced Defense Switched Network Integrated Management Support System network management functions and features.

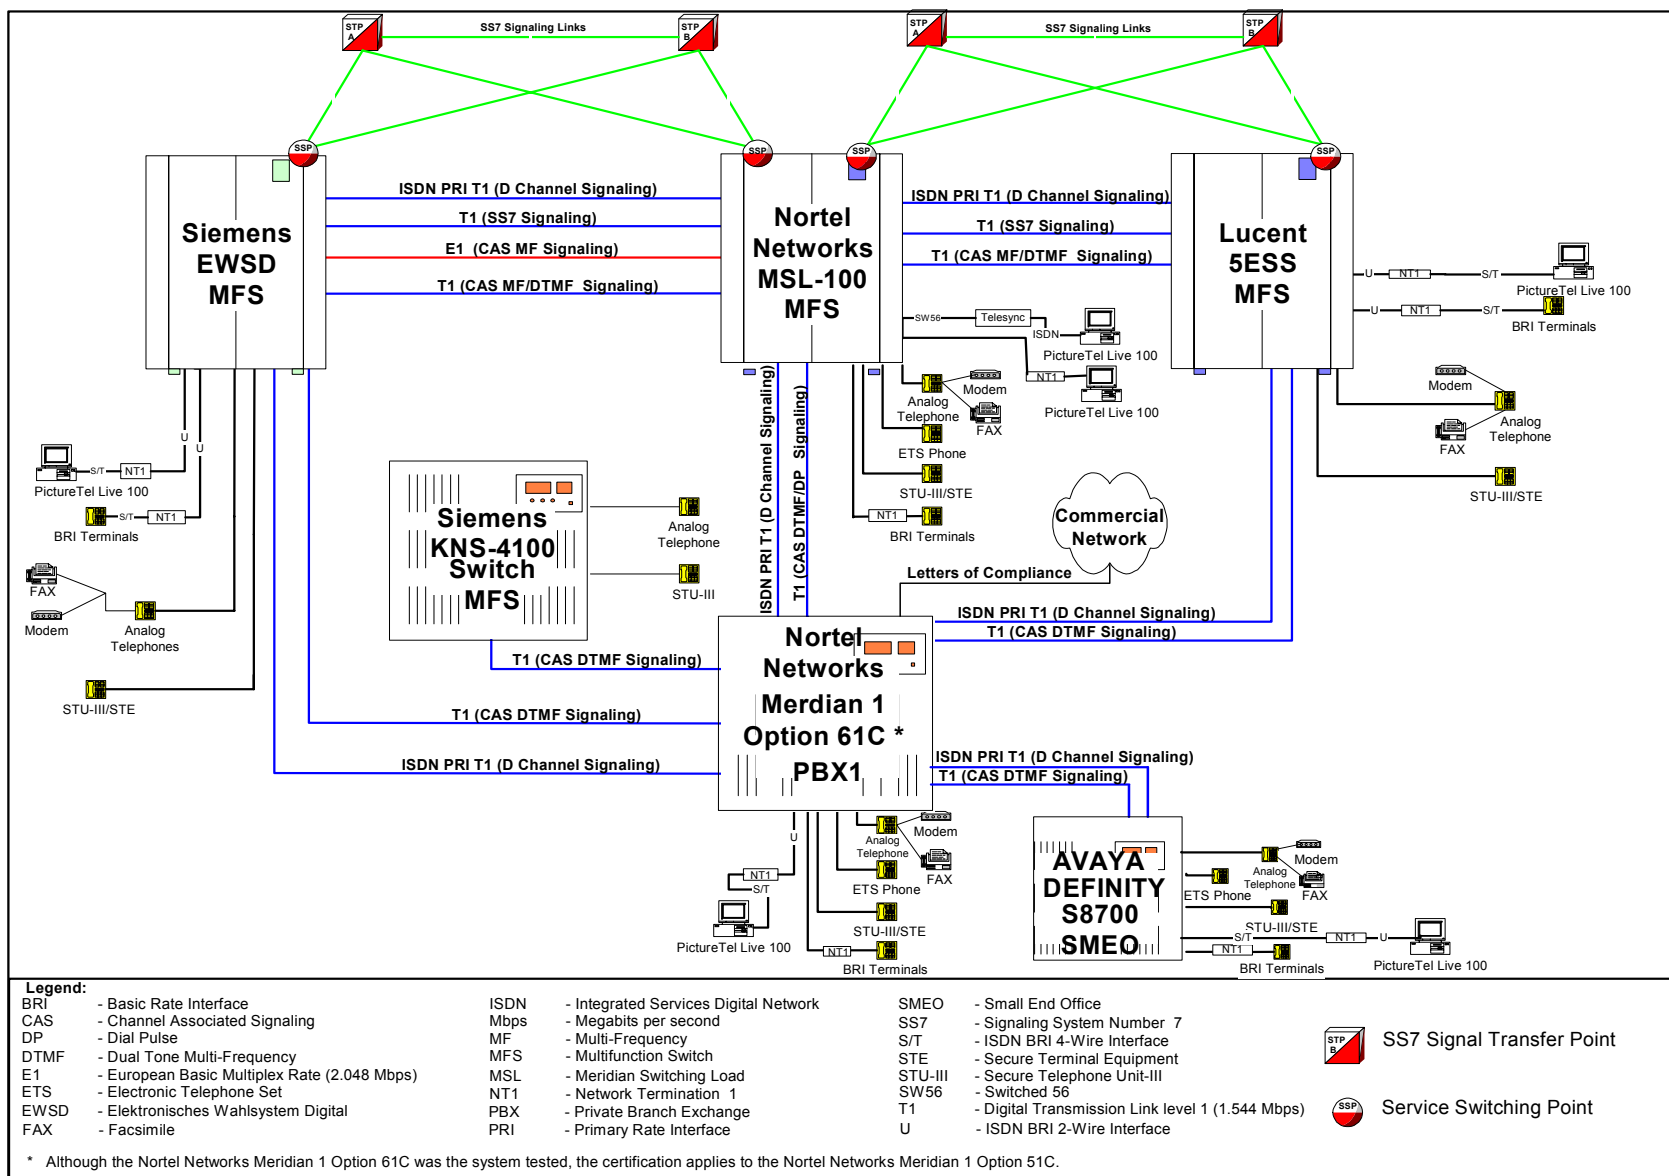

Figure 2-2. Test Configuration

10. TESTING LIMITATIONS. The Nortel Networks Meridian 1 Option 61C Digital Switching System was the only switch platform tested by JITC; however, the test results are applicable to the Option 51C. The Nortel Networks Meridian 1 Option 51C Digital Switching System employs the same software and hardware as the Option 61C with the exception that the Option 51C houses a single processor. As a result the Option 51C only meets the availability and reliability requirements for a PBX1 and not for a Small End Office. JITC analysis determined it to be functionally identical for certification purposes.

11. TEST RESULTS. Tables 2-3 through 2-6 synopsise the SUT interface ER and FR status and criticality. The identified test discrepancies shown below remained open after software patches were applied and regression testing was completed; they have an overall minor operational impact. A detailed description of these discrepancies can be found in paragraph 11a.

Table 2-3. Defense Switched Network Trunk Interface and Exchange Requirements

Interface & Signaling	Interface Status	Exchange and Functional Requirements	Test Discrepancies	GSTP Para (s)	GSCR Para (s)	Critical Yes/No	ER/FR Status
PCM-24 T1 CAS (B8ZS/ESF) (AMI/SF) DTMF	Certified	MLPP	No	II-2.2	2.2.1, 5.3.4.3 through 4.9	Yes	Met

Legend: DSN - Defense Switched Network ER - Exchange Requirements FR - Functional Requirements GSCR - Generic Switching Center Requirements GSTP - Generic Switch Test Plan Note: The certification/compliance of interoperability to commercial networks was satisfied based on the review of the vendor's letter of compliance to requirements identified as the "L" and "V" items listed in appendix E of the GSTP and specified in tables 2-1 through 2-15 of the GSCR.							

a. Discussion

(1) **DSN.** All critical interface ERs and FRs for DSN were met. The following minor exceptions are noted:

(a) The SUT attendant console does not meet the following GSCR requirements:

- Transfer of a line or trunk call at a precedence above ROUTINE. GSCR Para. 2.1.3.3
- Display of precedence or class of service. GSCR Para. 2.1.3.2
- Queuing by order of precedence (highest first). GSCR Para. 2.1.3.1

The SUT Attendant console is not certified. This is not a critical requirement for a PBX1 and its operational impact is minor.

(b) The SUT does not support route digit 5 or 6 for Hotline Services. This is not a critical requirement for a PBX1 and its operational impact is minor.

(c) The SUT does not support the following unique Integrated Services Digital Network (ISDN) Basic Rate Interface (BRI) Supplemental Services as specified in the respective GSCR paragraphs listed below. There are currently no switches in the DISN that support ISDN BRI Supplemental Services. The operational impact is minor.

- Conference Calling. GSCR Para. 21.3.2
- User-to-User Signaling. GSCR Para. 21.3.3
- Call Hold. GSCR Para. 21.3.4
- Call Waiting. GSCR Para. 21.3.5
- Normal Call Transfer. GSCR Para. 21.3.6
- Explicit Call Transfer. GSCR Para. 21.3.7
- ISDN Call Deflection. GSCR Para. 21.3.8
- Preset Conference Calling. GSCR Para. 21.3.11

(2) **Commercial Network Gateway.** The certification/compliance of interoperability to commercial networks was satisfied based on the review of the vendor's letter of compliance to requirements identified as the "L" and "V" items listed in appendix E of the GSCP, specified in tables 2-1 through 2-15 of the GSCR, with minor exceptions. Exceptions were reviewed and assessed by DISA NS53, the Development and Operational Engineering Department, and determined to have a minor operational impact.

b. Test Summary. The Nortel Networks Meridian 1 Option 51C Digital Switching System with its associated software releases listed in table 1 of the memo, is certified for joint use in the DSN, in accordance with the requirements set forth in the GSCR. Minor discrepancies identified during testing and the GSCR requirements not tested will have no adverse operational impact. The interoperability summary and status to include criticality for each interface is shown in tables 2-7 and 2-8.

12. TEST AND ANALYSIS REPORT. No detailed test report was developed per the Program Manager's request. JITC distributes interoperability information via the JITC Electronic Report Distribution (ERD) system -- ERD uses unclassified (NIPRNET) e-mail. More comprehensive interoperability status information is available via the JITC System Tracking Program (STP). The STP is accessible by .mil/gov users on the NIPRNET at <https://stp.fhu.disa.mil/>. Test reports, lessons learned, and related testing documents and references are on the JITC Joint Interoperability Tool (JIT) at <http://jit.fhu.disa.mil> (NIPRNET), or <http://199.208.204.125/> (SIPRNET). Information related to DSN testing is on the Telecom Switched Services Interoperability (TSSI) website at <http://jitc.fhu.disa.mil/tssi>.

Table 2-7. Nortel Networks Meridian 1 Option 51C Digital Switching System Interoperability Summary

Network	Status	Remarks
DSN	Certified	<ul style="list-style-type: none"> - Certified as a PBX1 and PBX2 - VoIP not Certified - The identified test discrepancies shown in enclosure 2 that remained open have an overall minor operational impact.
Commercial Network Gateway	Certified	- All critical requirements met
Legend: DSN - Defense Switched Network PBX - Private Branch Exchange VoIP - Voice over Internet Protocol		

Table 2-8. Interoperability Status

Defense Switched Network	Trunk Interfaces			
	Interface & Signaling	Critical	Status	Remarks
	PCM-24 T1 (B8ZS/ESF) (AMI/SF) CAS DTMF	No	Certified	Met all critical ERs and FRs. Hotline services ¹ and Attendant Services ² not met.
	PCM-24 T1 (B8ZS/ESF) (AMI/SF) CAS DP IN/DTMF OUT	No	Certified	Met all critical ERs and FRs. Hotline services ¹ and Attendant Services ² not met.
	PCM-24 T1 (B8ZS/ESF) ISDN PRI	Yes	Certified	Met all critical ERs and FRs. Hotline services ¹ and Attendant Services ² not met.
	Line Interfaces			
	Interface & Signaling	Critical	Status	Remarks
	TPC ISDN BRI ST and U Interface Q.931	Yes	Certified	Met all critical ERs and FRs. Hotline services ¹ , Attendant Services ² , and ISDN Supplemental Services ³ were not met. Operational impact is minor.
	TPC 2-Wire analog	Yes	Certified	Met all critical ERs and FRs. Hotline services ¹ and Attendant Services ² not met.
	TPC 2-Wire Digital (Proprietary)	No	Certified	Met all critical ERs and FRs. Hotline services ¹ and Attendant Services ² not met.
	Network Management Interfaces			
	Interface & Signaling	Critical	Status	Remarks
	TPC EIA-232 Asynchronous @ 9.6 kbps	No	Certified	Met all critical ERs and FRs.

Table 2-8. Interoperability Status (continued)

Notes: 1 SUT does not meet all the GSCR exchange requirements for Hotline Services. Hotline Services is not a critical requirement. 2 The does not meet the GSCR exchange requirements for Attendant Services. Attendant Services is not a critical requirement. 3 ISDN Supplemental Services currently not used in the DISN. The operational impact is none. 4 The certification/compliance of interoperability to commercial networks was satisfied based on the review of the vendor's letter of compliance to requirements identified as the "L" and "V" items listed in appendix E of the GSTP and specified in tables 2-1 through 2-15 of the GSCR.				

Meridian 1 Option 51C Software Release 25.47 Patch Identification Patch List

CORE Software Patch List		
Patch ID Number	PRS Number	Description
MPLR16260	MP17717	INI CODE ID (INI000 0000001D) FROM DCH_HANDLER PROCEDURE
MPLR16674	Q004828	DSN: Precedence calls to a Hunt Group do not get proper treatment
MPLR16789	Q436716	Four Issues: 1. T1 CAS Intermittent Preempt Wink. 2. Bug105. 3. ANSI T1.619A PRI Preempt for Re-use Unanswered. 4. AMA: Data: Outgoing (cause 9) - Timing Issue
MPLR16790	Q005260	SLPREM - Preemption: 1. Origination Busy Treatment. FFC code. 2. Busy Non-preemptable station trunk Preemption Cause 46. 3. T1 PRI Non-preemptable station Busy Not Equipped Announcement (BNEA).
MPLR16798	Q005385	DSN: No DMI Digit Manipulation after glare failure.
MPLR16801	Q005259	DSN: The M1 Option 61C switch does not provide the correct response to a failed wink start condition.
MPLR16806	Q005259	DSN: Outgoing Preempt Not For Reuse Answered Trailing Digit.
MPLR16857	Q005423	DSN: Outgoing trunk preemption fails over NI-2
MPLR16878	Q005193	DSN: Call Transfer 2nd leg sends originators precedence level.
MPLR16879	Q005194	DSN: Conference Call not preserving precedence level.
MPLR16912	Q005571	DSN: Different Service Domains via T1 CAS allow preemption
MPLR16926	Q005592	Change BSERV on NI2 causes system to INI.
MPLR16937	Q005626	DSN: Changing MLSD in LD 87 causes other fields to change.
MPLR16939	Q005571	DSN: BRI sets with different Service Domains allow preemption
MPLR16945	Q005629	NI2: Bearer channel disable/enable fails with SL-100/Siemens
MPLR17308	Q006365	Euro-ISDN STE mu-law to A-law conversion over E1 PRI
MLPR17473	Q001747	The IGF and OGF timers for preemption calls on T1 CAS needs the minimum threshold to be lowered.
MLPR17344	Q005871	ATVN trunks on TMDI card behave differently from tie trunks - channel status mismatch between M1 and SL100 when the loop is enabled.
MLPR17582	Q005965	DSN: Unable to send B-Channel status message from individual channels.
MLPR17502	Q005871	Channel status mismatch after Yellow Alarm cleared.
